

## 21 W AC driven Xenon bulbs equals 55 W halogen !

21W ballast to drive miniature HID xenon bulbs with AC current  
powered by [Nucon®](#)

- offers on the long run EU conform HID lighting without special requirements such as level control and head lamp washing device
  - reduces HID system cost for car makers significantly
  - enables EU legal retrofit for millions of cars
- 21W HID has the same lumens like standard 55 W halogen, but cuts down electrical consumption by more than half: Energy saving light for automotive!
- HID advantages like long life time and daylight spectrum remains unaffected
- small H3 bulb versions can be installed in compact cars even like Smart
- smallest automotive HID system
- much higher lumen density compared to LED
- can be installed in existing fog and daytime running light reflectors
